

ANTI-STATIC RESIN FLOORING

The threat of static buildup can damage sensitive electronic equipment, create a dangerous situation for employees, or even cause an explosion with serious risk of injury and damage. Certain markets such as manufacturers of electronics, drugs and cosmetics must consider anti-static solutions and implement a flooring program to protect both personnel and their equipment. Stonhard has introduced Stonblend ESD – a flooring solution designed to address these needs.

Products & Installation

Stonblend ESD is a trowelled epoxy mortar system that dissipates static electricity and prevents static buildup.

The Performance You Require

Stonblend ESD creates a seamless conductive, stain-resistant and durable surface, offering comprehensive defence in various challenging environments.

-  Anti-Static
-  High Strength
-  Wear Resistant
-  Stain Resistant
-  Chemical Resistant
-  Abrasion Resistant
-  Easy to Clean

The Design You Desire

Stonhard offers a range of eight standard colours, providing versatility in design options. Our formula allows the inclusion of light colour choices while maintaining high performance standards. This commitment ensures that both safety requirements and aesthetic preferences are consistently fulfilled.

The Expertise We Provide

Stonhard has more than a century of experience manufacturing and installing seamless floors. We meet safety regulations and honour specifications. Our direct sales force along with the Architectural Design & Engineering Team and Construction Management Group work with you from product recommendation to final walkthrough.

Our Certifications & Qualifications

Stonhard is committed to sustainability. Stonhard is ISO 9001 certified, a proud member of the U.S. Green Building Council, a member of the Manufacturer Advisory Panel for the HPD Collaborative and listed with mindful MATERIALS (mM).
